

Life Sciences Industry Solutions

Accelerate Diagnostic Discovery and Biological Innovation

Life science organizations today are under constant pressure from regulatory bodies to conform to an increasing number of industry standards while having to reduce costs and improve efficiencies. We provide a host of barcoding, FDA-compliant software, and asset monitoring and tracking solutions that let you focus on your core competency of discovering and developing biological innovations and products, while we focus on speeding up workflows, meeting regulatory compliance, and improving your bottom line.

Featured Life Sciences Solutions

Specimen Collection and Labeling

Eliminate errors through automated data capture and accurate specimen labeling.

Pharmacy Management

Manage and track the medication administration and ensure the quality of temperature sensitive medical products.

Asset Tracking and Inventory Management

Real-time track and trace of laboratory assets and inventory as they move throughout your facilities.

Cold Chain Management

Reimagine supply chain visibility with cutting-edge environmental sensors that monitor the entire shipping and storing process.

Network Infrastructure

Provide secure and robust connections to power automation throughout your organization.

Enterprise Device Management

Manage and secure devices through remote control monitoring, ensuring data protection and compliance.

Physical Security

Access control, video surveillance, and intrusion detection to secure your facilities and assets.

Cybersecurity

Secure sensitive data, technological assets, and laboratory operations via a comprehensive life sciences XIoT security platform.
